DECONTAMINATION/STAGING SITE ASSESSMENT

Facility Name :	Heritage Environmental Venice Staging Area	Facility Location ID:	VenW01
Assessment Date :	6/28/2010	Incident Name :	BP Spill
Physical Location :	308 Halliburton Road		
City, State :	Venice, LA	County :	Plaquemines

ASSESSMENT INFORMATION

General Site Information and Observations	
1. All waste stored in lined rolloff boxes?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
2. Rolloff boxes covered after filled (or end of day)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
3. Any evidence of oily waste or oily waste waters?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
4. If yes, was it adequately addressed?	
5. How many samples were collected?	2 - VW01-100628-WL-001-1 and VW01-100628-WL-002-1 3
Additional Comments : <p>Re: Question #3 below: Decon operations are an ongoing activity and it would be extremely resource intensive to cover and uncover the rolloffs each time they added wastes.</p> <p>Three Frac tanks are onsite which contain a mixture of oil and water generated from both decon activities and offloading skimmer barges. According to facility rep all liquids in the frac tanks are emptied via tanker truck and transported to a Newpark facility in Port Arthur, TX. No separation of any liquids takes place at this facility according to Mr. Lawson. A significant oil layer was encountered in one of the frac tanks necessitating collection of a separate oil and water sample.</p> <p>According to facility rep all rolloffs and intermodal containers containing oily debris (sorbent boom, sand, ppe, oily vegetation) are transported to the local Venice landfill for disposal.</p>
